

Unsuccessful starting Spark in preparation for assignment. Will work with technical support to resolve the problems. I sent an email to Support on 11/12 for assistance. I will complete assignment after receiving assistance from support.

Dear Support,

I am working on the assignment from Session 19 RDD. However, I am having trouble executing the commands.

I believe I have the necessary services running:

```
acadgild@localhost ~]$ jps
6048 NameNode
20225 Jps
19266 MainGenericRunner
6148 DataNode
19015 Master
6343 SecondaryNameNode
6487 ResourceManager
19081 Worker
6591 NodeManager
[acadgild@localhost ~]$
```

The following is the error I receive:

```
scala> import org.apache2.spark.SparkContext;
<console>:11: error: object apache2 is not a member of package org
  import org.apache2.spark.SparkContext;
                ^
```

I am sure that I am missing something in the setup. Could you please provide some instructions for importing the required spark components (SparkContext, SparkConf)?

Thank you,

Tony
